CASE STUDY

ATC SUNRAY RF RADIATORS

"The design of the radiators is stylish and in keeping with the cottage designs and we found were less bulky than some of the existing radiators and storage heaters we had. "

CLIENT REQUIREMENTS

Over the past year, the Manager of Runswick Bay Cottages has advised the owners of the holiday cottages that they needed to phase out their old storage heaters and end of life panel heaters that had been installed many years ago.
When looking for a suitable solution, the ATC Sun Ray RF Radiators were the best option for a number of reasons.

Helen Massey confirmed *"The running cost savings were significant - holiday guests love to leave the heating on all day while they go out on long walks, but now it isn't a worry. And of course, the ability to to program the radiators remotely with wireless control via the App was a huge advantage. This allows you to turn the heaters on before guests arrive and turn them off when they have left. A fantastic benefit to those owners who do not live on site."*

PRODUCT CRITERIA

- Energy efficient heating
- WiFi controllable
- Easy for owners to programme
- Must provide a comfortable heat output
- Minimum maintenance required
- Long life warranty

PRODUCT EVALUATED & CHOSEN

Project consists of:
10 x ATC Sunray RF Radiators
